QUALITY ASSURANCE DEPARTMENT

PRE RISK ASSESSEMENT FOR VERTICAL DEDUSTER CUM METAL DETECTOR

1.0 Introduction

The "VERTICAL DEDUSTER CUM METAL DETECTOR" is intended to use for dedusting and metal detection of compressed tablets. De-dusting is achieved by moving the tablets in a upward circular direction through a perforated bowl then the tablets are pass through a electronically balance area and metal detection is achieved by the phase sensitive detection with assurance of product safety.

2.0 Objective

Objective of this report is to assess the risk associated with the equipment VERTICAL
DEDUSTER CUM METAL DETECTOR in pre assessment in the manufacturing facility of
Cepha Block at, in line with the guidance of the Risk Management manual of
and ICH Q9.

3.0 Scope

4.0 Risk assessment approach

Risk assessment is carried out as per FMEA (Failure mode effects analysis) method.

5.0 Responsibility

Quality Assurance

Engineering

Production

Quality Control

Store

6.0 Reference Documents

- 1. ICH Q9-Quality Risk Management
- 2. guidance on Risk assessment.

QUALITY ASSURANCE DEPARTMENT

PRE RISK ASSESSEMENT FOR VERTICAL DEDUSTER CUM METAL DETECTOR

Background

7.0 RISK RANKING PARAMETERS

7.1 Rating parameters for Severity

Effect	Scale	Description
No effect	1	No effect on output
Very slight	2	Customer not annoyed
Slight	3	Slight
Minor	4	Minor effect on performance
Moderate	5	Moderate effect on performance
Significant	6	Partial failure but operable
Major	7	Product performance severely affected, but some operability and safe
Extreme	8	Very dissatisfied, product inoperable but safe
Serious	9	Potentially hazardous effect, time-dependent failure
Hazardous	10	Hazardous effect, safety related sudden failure

7.2 Rating parameters for Occurrence

Occurrence	Scale	Description
Almost never	1	Failure unlikely; history shows no failures
Remote 2		Rare number of historical failure
Very Slight	3	Very few failures likely
Slight	4	Few failures likely
Low	5	Occasional number of failures likely
Medium	6	Medium number of failures likely
Moderately High	7	Moderately high number of failures likely

QUALITY ASSURANCE DEPARTMENT

PRE RISK ASSESSEMENT FOR VERTICAL DEDUSTER CUM METAL DETECTOR

Occurrence	Scale	Description
High	8	High number of failures likely
Very High	9	Very high number of failures likely
Almost certain	10	Failure almost certain

7.3 Rating parameters for Detection control

Detection	Scale	Description					
Almost certain	1	Proven detection methods with high reliability					
Very High	2	Proven detection methods available					
High	3	Detection tools have high chance of detecting methods					
Moderately High 4		Almost certain not to detect failure					
Medium	5	Detection tools have moderate chance of detecting defect					
Low	6	Detection tools have a low chance of detecting failure					
Slight	7	Detection tools may not detect failure					
Very Slight	8	Detection tools will probably not detect failure					
Remote	9	Detection tools most likely will not detect failure					
Impossible	10	Failure not detected					

Note: Individual contributory factor for each potential failure mode shall be rated. Other scale parameters may also be selected based on the process.

8.0 ACCEPTANCE CRITERIA FOR RISK ASSESSMENT BY FMEA

Acceptance criteria for FMEA are as follows:

S.No.	RPN Rating	RPN Category	Action Status
1.	≥ 76	Critical	CAPA Required
2.	51 to 75	Major	CAPA Required
3.	26 to 50	Moderate	CAPA Required
4.	Up to 25	Minor	Not applicable

9.0 PRE-RISK ASSESSMENT AS PER FMEA:

Name of facility/Utility/Equipment/Process/Operation: VERTICAL DEDUSTER CUM METAL DETECTOR

					(C)	7 <u>0</u>		D)		Ą	Action Results					
S.No.	Potential Failure Mode	Potential effect (s) of failure	Severity (S)	Potential cause/ Mechanism of failure	Occurrence (O)	Current Control	Detection (D)	RPN (S x O x I	Recommended action	Responsibility and TCD	Action taken	Severity	Occurrence	Detection	New RPN	
1	Required Area (floor, Temperature, RH, Differential pressure) not proper for the vertical deduster cum metal detector.	Area will not be suitable for proper functioning of Equipment.	6	No or less clarity of the product requirement and machine functionality.	3	Approved layout is in place.	3	54	Care has to be taken during Area Qualification & equipment qualification	Engineering ,QA, Production						
2	Required parameter not defined in URS. / URS not proper for system	Systems not receive suitable for proper output of quality with all parameter as per specification. Affect the product quality.	4	No or less clarity of the product requirement and machine functionality.	3	Preparation of URS before procurement of equipment is in place with all pre-specified parameter.	2	24	Current control measures are adequate	NA	NA	NA	NA	NA	NA	

						lo1		D)		x	Action Results					
S.No.	Potential Failure Mode	Potential effect (s) of failure	Severity (S)	Potential cause/ Mechanism of failure	Occurrence (O)	Current Control	Detection (D)	RPN (S x O x D)	Recommended action	Responsibility and TCD	Action taken	Severity	Occurrence	Detection	New RPN	
3	Required utilities (compressed air, electricity)are not available	Machine will not function as expected.	7	No or less clarity of the product requirement and machine functionality with respect to utility requirement.	2	URS is in place for system with all predefined requirement of utility like electricity.	1	14	Current control measures are adequate	NA	NA	NA	NA	NA	NA	
4	Wrong machine selection in terms of Dimension, capacity and output.	Installation will be affected if dimension is not considered. Output will also get affected if capacity is not considered.	6	No or less clarity of the machine.	2	URS is in place for dimension, capacity and rated output of the of the vertical deduster cum metal detector	1	12	Current control measures are adequate	NA	NA	NA	NA	NA	NA	
5	MOC and machine contact parts not meeting GMP requirement	Not meting GMP requirements and product get affected.	7	No or less clarity of the machine contact part and MOC.	3	URS is in place for MOC (contact part should be of SS316 or 316L and food grade material and non contact parts will be of SS304 and machine contact parts to fulfill GMP requirements	1	21	Current control measures are adequate	NA	NA	NA	NA	NA	NA	

				(0)	rol		<u> </u>		1	Action Results					
S.No.	Potential Failure Mode	Potential effect (s) of failure	Severity (S)	Potential cause/ Mechanism of failure	Occurrence ((Current Control	Detection (D)	RPN (S x O x D)	Recommended action	Responsibility and TCD	Action taken	Severity	Occurrence	Detection	New RPN
6	Equipment not received with the process safety measures.	Accident may happen.	10	No or less clarity about equipment safety measures.	2	Requirement of Safety measures like Earthing, Castor wheel for locking arrangement, is defined in URS.	1	20	Current control measures are adequate	NA	NA	NA	NA	NA	NA
7	Other accessories like metal test blocks for calibration not received.	GMP requirement of Metal detection is not performed Properly.	10	Not received with Metal detector machine	2	Requirement is defined in URS	1	20	Current control measures are adequate	NA	NA	NA	NA	NA	NA

9.1 REVIEW OF RISK ASSESSMENT AS PER FMEA AFTER ACTION TAKEN:

Action Results						
Action Taken	Severity	Occurrence	Detectability	RPN	Remarks	

U.U RISK CONTROL MEASURES
nvestigation/ findings: (an extra sheet can be used if space is insufficient)

11.0 SUMMARY AND CONCLUSION REPORT FOR RISK ASSESSMENT
Summary:
•••••••••••••••••••••••••••••••••••••••
Conclusion:

12.0 FINAL REPORT APPROVAL:

The final report shall be signed after identifying all the risks and critical control parameters. All the reports or documents have been attached to the respective report (if applicable).

Signature in the block below indicates that all the control measures taken are documented and have been reviewed and found to be acceptable.
