17.0	QRA Approval	24

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

### 1.0 OBJECTIVE:

To provide the documented evidence that there are sufficient controls to avoid any risk in case of raw materials transferred to warehouse facility.

### 2.0 SCOPE:

This risk analysis study Protocol is applicable for performing risk analysis study for warehouse facility.

### 3.0 RESPONSIBILITY:

Department	Responsibility
Quality Assurance	<ul style="list-style-type: none"><li>• Shall prepare &amp; review the Risk analysis Protocol.</li><li>• Execution of the Risk analysis Protocol with Warehouse and Engineering.</li><li>• Shall prepare summary report.</li><li>• Risk analysis Protocol shall be approved by the QA prior the execution.</li><li>• Shall review the executed Protocol to check the compliance and corrective action for any discrepancies found.</li><li>• Also shall prepare the summary and conclusion of the Risk analysis Study.</li></ul>
Warehouse	<ul style="list-style-type: none"><li>• Reviewing of Risk analysis Protocol for correctness, completeness and technical excellence.</li><li>• To provide support for execution of Risk analysis Study as per Protocol.</li><li>• Approval of Risk analysis Protocol after execution.</li></ul>
Engineering	<ul style="list-style-type: none"><li>• Reviewing of Risk analysis Protocol for correctness, completeness and technical excellence.</li><li>• To provide support for execution of Risk analysis Study as per Protocol.</li><li>• Approval of Risk analysis Protocol after execution.</li></ul>

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

### 4.0 REASON FOR RISK ANALYSIS:

Due to storage constraints of Raw Materials at ....., site management had decided to keep the Raw materials specifically of Oral solids and external preparations in a new. This new storage location need to be evaluated for the risk associated with it & further these risks shall be mitigated accordingly.

### 5.0 SITE OF STUDY:

New Warehouse facility.

### 6.0 RISK COMMUNICATION & TRAINING:

- The Risk analysis team shall be authorized by Head-QA or his/her designee.
- Quality Risk Management Team shall be cross functional team comprised of experts from different areas such as QA and Production.
- Training shall be imparted to the team members before execution of Protocol for proper understanding of the procedure.

#### Quality Risk Management Team:

S.No.	Name	Department
1.		Warehouse
2.		QA
3.		QA

### 7.0 REFERENCE DOCUMENTS/DRAWINGS:

S.No.	Document Title	Document Number
1.	Quality Risk Management	
2.	Monitoring of Temperature, RH & DP	
3.	Layout of Warehouse	
4.	Training of Employees	
5.	<a href="https://gmpsop.com/role-of-the-warehouse-in-pharmaceuticals-manufacturing/#">https://gmpsop.com/role-of-the-warehouse-in-pharmaceuticals-manufacturing/#</a>	
6.	Warehouse SOP's	

**PHARMA DEVILS**

QUALITY ASSURANCE DEPARTMENT

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

### 8.0 SYSTEM DESCRIPTION:

The warehouse plays an important role in manufacturing quality products, it is responsible for all incoming goods (including labelling and packaging) and for releasing finished products, there are GMP rules in place to ensure that materials are handled and stored properly, while appropriate documentation is maintained.

There are many materials which are temperature-sensitive, that break down or degrade if exposed to heat or light, thus becoming ineffective. A pharmaceutical warehouse must be expertly managed and run in compliance in order for the company to protect and distribute a quality product.

**RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY**

**8.3 PROCESS FLOW:**

**POTENTIAL FAILURE**

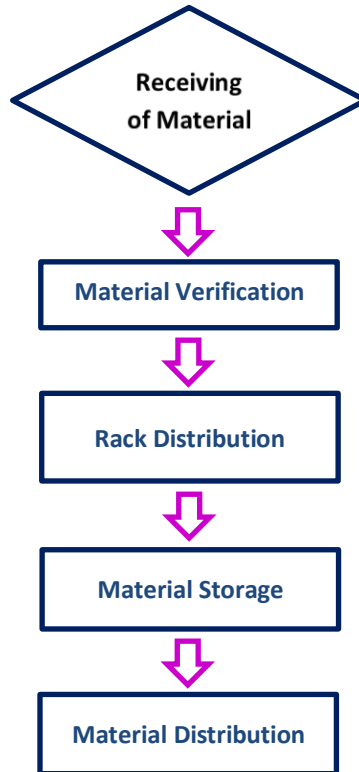

- Ruptured Bags & Containers
- Unavailability of shed for material receiving

- Improper Verification

- Random arrangement of material

- Temperature not maintained

- Temperature not maintained during transfer of Temperature sensitive material

**CONTROLS**

- Verified during receiving
- Barrier from outside environment

- Invoice
- Individual material code

- Rack distribution done alphabetically
- Off the floor & away from wall

- Air Conditioning System installed & Temperature Mapping done.
- Cold Storage available

- Transport Validation

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

**9.0 RISK IDENTIFICATION, EVALUATION & MITIGATION:** At the very basic stage of design, the Risk Assessment is carried out to verify that all features are taken into consideration to avoid the risk of failure of critical GMP and EHS parameter in the equipment. During study, all GMP, EHS and operational parameters will be identified and assessed for the risk, appropriate mitigation will be proposed and verification point will be identified and defined. The Risk Assessment report is produced to provide the documented evidence that design concepts or requirement are complete in considering all GMP, EHS and Operational risks.

S.No.	Risk Identification	Risk Evaluation	Risk Mitigation
1.	<b>Material Receiving</b>	In case of absence of shed at receiving bay, the material in rainy season may get exposed to rainy water & get wet. Dust over the surface of containers & bags may contaminate the material.	Risk started from material receiving, material shall be received under shed. During receiving material shall be passed through de-dusting tunnel. All incoming bags & containers shall be verified for their intactness.
2.	<b>Material Verification</b>	Lack of trained persons may not be able to verify the related documents.	Incoming materials shall be verified as per the received invoice. Results of the vendor COA shall be within the acceptance criteria.
3.	<b>Material Arrangement</b>	Improper material arrangement may create problems during tracing.	Material arrangement shall be traceable & upside. Materials shall be kept at reachable height.
4.	<b>Material Storage</b>	Improper material storage may lead to destruction of material bags & containers.	Material storage shall be as per their mentioned requirement. Light sensitive material shall be kept away from light. Moisture sensitive material shall be kept away from moisture. Refrigeration system required for materials which needs 2-8°C storage conditions.
5.	<b>Material Distribution</b>	Improper & open material transport system may contaminate or deteriorate the material when directly exposed to environment.	Plant to plant distribution shall be done in containers as per the storage requirement.
6.	<b>Safety</b>	Unavailability of Emergency exit may result into panic situation in case of any emergency.	Emergency exit shall be there in case of any emergency.
7.	<b>Manpower</b>	Untrained manpower may avoid the basic gmp rules which may result into product failures.	Trained manpower required.
8.	<b>Qualification</b>	Weighing, Sampling & Dispensing done with unqualified instruments & equipment. Improper weight. quantity may receive.	Qualification shall be completed prior use.

**PHARMA DEVILS**

QUALITY ASSURANCE DEPARTMENT

**RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY**

S.No.	Risk Identification	Risk Evaluation	Risk Mitigation
9.	<b>Documentation</b>	For the starting of any new facility, Standard operating procedures shall be in place, without any written procedures there will be high risk at every stage.	Related SOP's shall be in place.
10.	<b>Data Integrity</b>	Lack of training may lead to data integrity.	Training on GMP, GDP, GWP (Good Warehouse Practices) & Data Integrity shall be given.

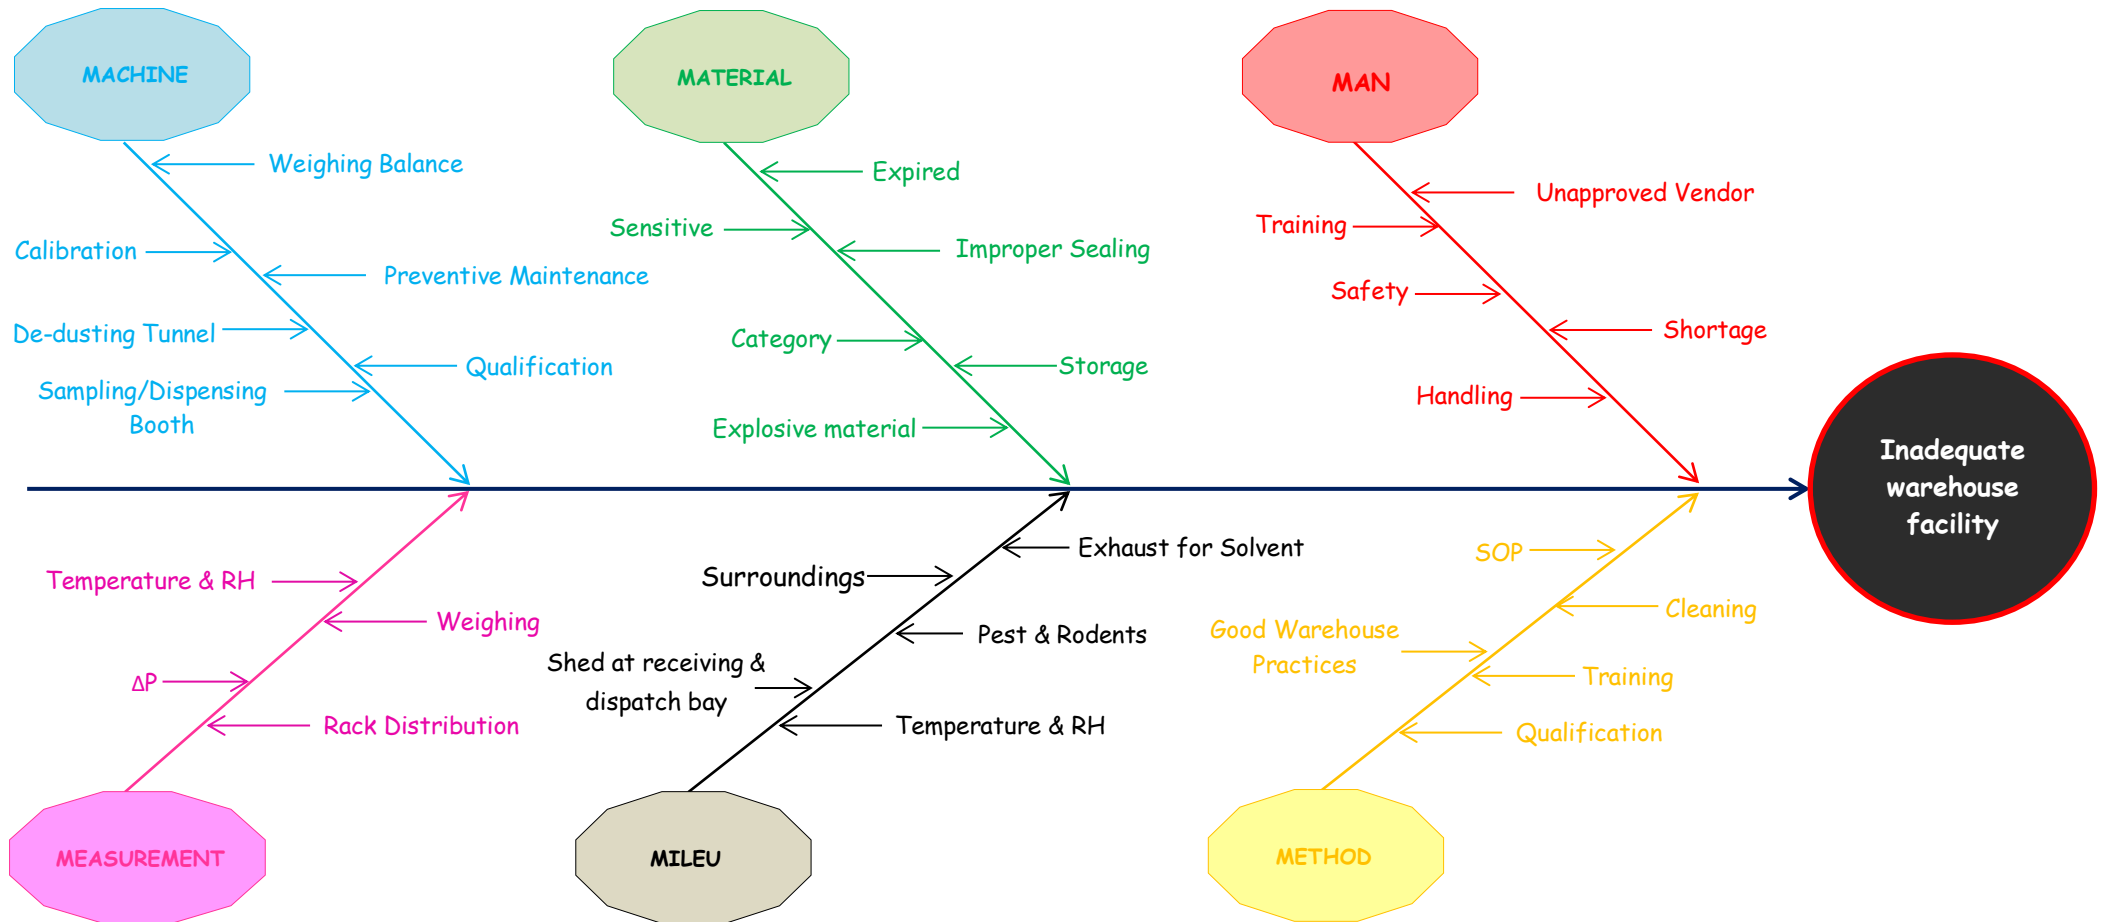

**RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY**

**10.0 RISK ANALYSIS TOOLS, RE-RISK ANALYSIS CRITERIA:**

**10.1 Cause & Effect Analysis:**

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

**SUMMARY OF THE 6 M/FISH BONE DIAGRAM/ISHIKAWA DIAGRAM:** It is used for the evaluation of inadequate warehouse facility on finished products; following are the areas of concern considered for investigation. Man, Material, Measurement, Method, Milieu & Machine. It has been evaluated that all of the 6 M may contribute in failure of new warehouse facility resulting in failure of product.

**MAN: Personnel supervising or performing warehouse activities are not aware of GMP & are untrained which may result into:**

- Intermixing of materials.
- Cross contamination.
- Safety related issues.

**MATERIAL: Handling & Storage of raw materials plays an important role in Warehouse management. Miss Management may lead to:**

- Contaminated material.
- Contamination with microorganisms or other chemicals.
- Degradation from exposure to excessive environmental conditions such as heat, cold, sunlight, moisture, etc.
- Improper labelling.
- Improper sampling and testing, and Use of materials that fails to meet acceptance specifications.
- Material from unapproved vendor.
- Safety related issue may take place during improper handling of explosive material or solvent.
- Improper handling due to unavailability of MSDS.

**MILIEU: The facility of the warehouse plays major role in maintaining proper storage conditions, Inadequate surrounding environment may lead to:**

- Inadequate filth and pest controls.
- Rough floors, walls, and ceilings.
- Lack of air filtration systems.
- Unavailability of proper shedding at receiving & dispatch bay.
- Improper lighting and ventilation.
- Poorly located vents, ledges, and drains, and inadequate washing, cleaning, toilet, and locker facilities to allow for sanitary operation, cleaning of facilities, equipment, and utensils; and personal cleanliness.
- Exhaust not available for Solvent dispensing area and air is re-circulated.

**MACHINE: The equipment & instruments used in warehouse plays important role in day to day activities:**

- Inappropriate design, size, material leading to corrosion and accumulation of static material and/or adulteration with lubricants, coolants, dirt, and sanitizing agents.
- Improper cleaning and sanitization.
- Design preventing proper cleaning and maintenance.
- Improper calibration and irregular service, and deliberate use of defective equipment.
- Machine not qualified.
- Inappropriate preventive maintenance.
- Unavailability of De-dusting tunnel.
- Qualification of area & equipment not performed.

**METHOD: There are various reasons during warehouse practices which may lead to different failures:**

- Inappropriate cleaning in-between batches to minimize the amount of product changeovers.
- Use of an open manufacturing system exposing the product to the immediate room environment.
- Absence of an area line clearance according to approved procedures following each cleaning process and between each batch.

**PHARMA DEVILS**

QUALITY ASSURANCE DEPARTMENT

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

- Lack of cleaning status labelling on all equipment and materials used within the manufacturing facility.
- Improper training and unaware about the Good Warehouse Practices.

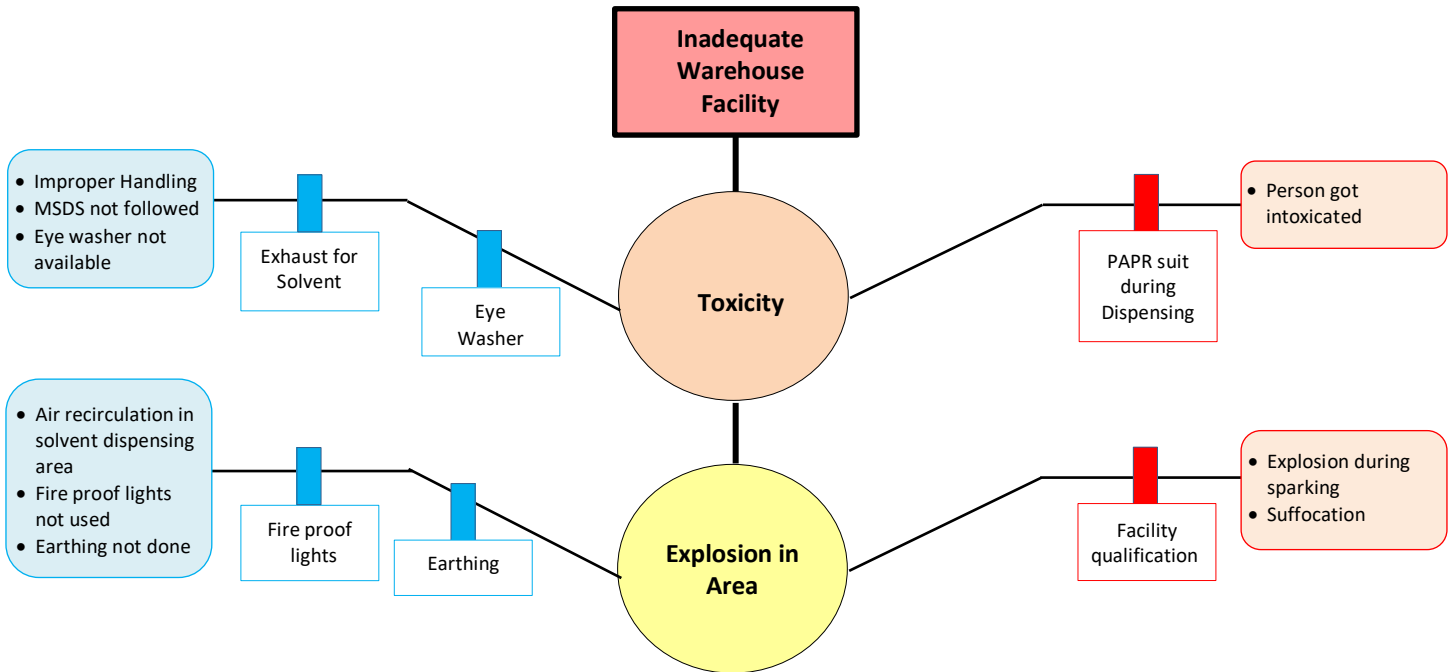

**MEASUREMENT:** There are many factors which shall be regularly monitored & recorded such as:

- Temperature & RH of the area not under control & recording time too exhaustive.
- Rack distribution shall be appropriate & traceable.
- Pressure Differential of RLAFF & Area shall be monitored on regular basis to avoid any cross contamination.
- Weighing Balances shall be Calibrated & Verified on daily basis.

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

### 10.2 Bow Tie analysis:

**SUMMARY OF THE BOW TIE ANALYSIS:** Bow Tie analysis for inadequate warehouse facility gives an overview of multiple plausible scenarios in a single picture. It provides a simple, visual explanation of a risk that would be much more difficult to explain.

A hazard is being identified as “Inadequate Warehouse Facility”, which may result into moment when control is lost over the hazard. There is no damage or negative impact yet, but it is imminent. Threats are considered on the left side and consequences are on the right side. Barriers on the left side interrupt the scenario so that the threats do not occur while barriers on the right side mitigate the impact.

**Following are the barriers need to be focused to control the threats and consequences:**

- ✓ Exhaust for Solvent Dispensing.
- ✓ Material shall be handled as per MSDS.
- ✓ PAPR suit for toxic material handling.
- ✓ Fire proof lights shall be used.
- ✓ Earthing for the electrical circuits.

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

### 10.3 Failure Mode Effect Analysis:

In the following section a table is produced for the risk analysis using FMEA tool. The significance or instruction for each column is described in the following paragraph.

<b>Column 1:</b>	<b>Serial number</b> of Risk Analysis item
<b>Column 2:</b>	<b>Item/Function:</b> Identify the process step or component associated with the risk.
<b>Column 3:</b>	<b>Potential Failure Mode:</b> Identify the type of risk associated with the process or component.
<b>Column 4:</b>	<b>Effect of Potential Failure/Cause:</b> Verify that whether risk have <b>GMP impact</b> .
<b>Column 5/6/7/8/9:</b>	<b>Severity/Occurrence/Detection/Risk level/Risk Acceptance:</b> Risk Priority Number to be calculated by taking Severity, Occurrence & Detection of potential failure into consideration.
<b>Column 10:</b>	<b>Risk Mitigation:</b> Write the risk mitigation strategy as considered in design.
<b>Column 11/12/13/14/15:</b>	<b>Severity/Occurrence/Detection/Risk level/Risk Acceptance:</b> Risk Priority Number to be calculated after mitigation by taking Severity, Occurrence & Detection of potential failure into consideration.
<b>Column 16:</b>	<b>Recommended action:</b> Recommended actions should be given for controlling failure occurrence.

**Table 1: Instruction for each column given above**

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

### FMEA MATRIX

DETECTABILITY	3	9			18			27		
	2	6			12			18		
	1	3			6			9		
	0	3			6			9		
		1	2	3	4	5	6	7	8	9

SEVERITY x OCCURRENCE

## RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY

The Risk Priority Number (RPN/Overall Risk) changes based upon the risk. The Risk Assessment team shall decide the acceptance criteria. For example the risk priority number is categorized as below:

### Severity Ranking:

Severity Effect	Rating
No Effect	1
Moderate Effect	2
Serious Effect	3

### Likelihood Occurrence Ranking:

Likelihood Occurrence	Rating
Unlikely	1
Possible	2
Almost Certain (Every time)	3

### Detection Ranking:

Severity Effect	Rating
Always Detected	1
Might Detect Failure	2
Lack of detection control	3

Risk Priority Number (RPN)	Risk levels
Up to 6	Low
7-11	Medium
12 to $\leq$ 27	High

**RPN = Severity x Occurrence x Detection**

## **RISK ANALYSIS STUDY PROTOCOL FOR WAREHOUSE FACILITY**

### **11.0 VERIFICATION OF ACTION PLAN:**

All the action points as per QRA shall be monitored through CAPA system.

### **12.0 CONCLUSION:**

### **13.0 RECOMMENDATION:**

### **14.0 DEVIATION FROM PRE DEFINED SPECIFICATION, IF ANY:**

Deviations observed from the pre-defined procedures shall be addressed through SOP Titled “**Handling of Deviations**”.

### **15.0 CHANGE CONTROL, IF ANY:**

Any changes shall be done through SOP Titled, “**Change Management**”.

### **16.0 ABBREVIATIONS:**

FMEA : Failure Mode Effect Analysis

GMP : Good Manufacturing Practices

RPN : Risk Priority Number
