QUALITY RISK ASSESSMENT & MITIGATION PLAN

FAILURE MODE EFFECT ANALYSIS FOR MIXING OF CARTONS

Reference Document No.:

Risk Assessment No.:

- 1. OBJECTIVE:** To provide the documented evidence that there is low level of risk in case of “Mixing of Cartons”.
- 2. SCOPE:** The scope of this document is limited to Carton mixing at facility.
- 3. RESPONSIBILITY:**

Department	Responsibility
Quality Assurance	<ul style="list-style-type: none">• Preparation, Review, and Compilation of FMEA• Post Approval of FMEA
Production packing	<ul style="list-style-type: none">• Review of FMEA

4. REASON FOR RISK ANALYSIS:

To mitigate & monitor the risk associated with the mixing of cartons.

5. SITE OF STUDY:

6. RISK COMMUNICATION & TRAINING:

- The Risk analysis team shall be authorized by the Head-QA or his/her designee.
- Quality Risk Management Team shall be cross functional team comprised of expert from different areas.
- Training shall be imparted to the concerned team.

Risk Assessment No.:

7. RISK IDENTIFICATION, EVALUATION & MITIGATION:

INTRODUCTION: Carton mix up is the contamination of one product with another product by human Errors, inadequate process or plant design. It depends upon the nature of mixing which decides whether the complaint is Critical, Major or Minor.

CARTON MIXING CAN BE CONSIDERED 04 TYPES:

1. **Carton of same product with different batch nos.:** Change in batch no. does not have any impact on product quality.
2. **Carton of different products with same content & claim:** Same API claim does not impact the product quality,
3. **Carton of different products with different content & claim:** Different content with different claim may have severe impact on health.
4. **Carton of same product with different label claim:** Two type of mixing can be considered i.e. Carton depicting higher claim while inside strips with lower claim & vice versa. In both cases, if by taken by mistake, the medicine will either loose its effectiveness or will overdose.

As & tablets are used in the treatment of Overactive bladder (OAB) symptoms. OAB is a collection of urinary symptoms, including frequent urination, urgent need to urinate, and inability to control urination.

.....: **Dosage:** PO qDay means maximum daily dose of 75 mg for& 15 mg for

.....: **Dosage:** PO qDay means maximum daily dose of 150 mg for & 15 mg for

Note: *po* (per os) means "by mouth" *pc* (post cibum) means "after meals" *prn* (pro re nata) means "as needed" *q3h* (quaque 3 hora) means "every three hours" *qd* (quaque die) means "every day"

Hypothetically if incase of carton mixing, if is given thrice a day considering carton claim of then also it will be effective as per the minimum dose per day (..... maximum daily dose for and will not have any severe health impact.

<p>Carton mixing may be 04 types:</p> <ol style="list-style-type: none"> Carton of same products with different batch nos. Carton of different products with same content & claim. Carton of different products with different content & claim. Carton of same product with different label claim. 	<p>Criticality of mixing of cartons depends on type of carton mixing:</p> <ol style="list-style-type: none"> Mixing of same Cartons with different batch nos. having same claim & content does not have any impact on product quality. Mixing of cartons of different products with same content & claim have product identity problem. Mixing of different cartons with different content & claim comes under critical observation& may lead to severe impact on health. Mixing of carton of same product with different label claim may or may not have impact, it depends on mixing potency. 	<ul style="list-style-type: none"> Packing materials are stored in separate racks. Primary & Secondary material are stored separately. Line clearance procedure is followed before start the overprinting & packing. Overprinting on Carton/Catch covers/labels is done batch wise, only one product at a time. Different product are not packed in close proximity unless there is proper physical segregation. Outdate, obsolete and rejected packaging materials are destroyed and records are maintained. Persons doing visual inspection are trained to perform their activities. Proper design of flow of material.

8. RISK ASSESSMENT TOOL:

In the following section a table is produced for the risk analysis using FMEA tool. The significance or Instruction for each column is described in the following paragraph.

Column 1	Serial number of Risk Analysis item.
Column 2	Item/Function: Identify the process step or component associated with the risk.
Column 3	Potential Failure Mode: Identify the type of risk associated with the process or component.
Column 4	Effect of Potential Failure/Cause: Verify that whether risk have GMP impact.
Column 5	Potential Cause
Column 6	Risk Mitigation as a Current Control: Write the risk mitigation strategy as considered in design.
Column 7	References
Column 8/9/10/11	Severity/Occurrence/Detection/Risk level/Risk Acceptance: Risk Priority Number to be calculated by taking Severity, Occurrence & Detection of potential failure into consideration.
Column 12	Recommended action: Recommended actions should be given for controlling failure occurrence.
Column 13/14/15/16	Severity/Occurrence/Detection/Risk level/Risk Acceptance: After recommendation implementations, Risk Priority Number to be calculated by taking Severity, Occurrence & Detection of potential failure into consideration.

Table 1: Instruction for each column given above
